complete it in class and/or missed class, you can complete and submit it solo. While for that reason the due date is the day after class, if you complete it during our session you can submit it right away and you're done. Otherwise, submit it by the due date.

## In class lab: Create a studio genres pictures page

Working in pairs, save a copy of the provided start file, add in then edit the database code, then update the page with the number of queries and dynamic output loop.

1. Save the file `movies_labexercise.html` as a php file *directly on the server*. Test that the php file runs/renders. (Note: the initial file is all html and text, no php yet.)
2. Open the file `php_sample_code.txt`. Add the php database block to the top of the starter page. Run (to make sure no errors).
3. Edit the SELECT statement so that it matches ONE studio (label field) and ONE genre.
4. Edit the text of the page to reflect the studio and genre.
5. Add the php output loop block in the page, adapt it to match the sample output from the html page.

To submit the completed lab paste the working page/url into this assignment.  
Note that both members of the group should submit the same url, and yes you can save the same url for both of your (since you worked as a pair).
