Custom health chart lab

▼ [Hide Assignment Information](#)

Instructions

Custom health stat page, customized graphic

So this original page/code displays summary data about patients based on a filter. You can test some of the urls below to see how it returns different data based on the

condition=Asthma

- [healthcondition.php?condition=Cancer](#)
- [healthcondition.php?condition=Diabetes](#)
- [healthcondition.php?condition=Hypertension](#)

You are going to adapt the code and create a custom graphic for the stats (like my non-designer pass above) such that:

- you can adapt this code (php and sql) from this page to filter by and display aggregate data about patients who received different medication (not medical condition). *Note that change, that the sample code I give you filters by condition whereas your page will do so by medication.*
- Create a custom graphic / screen mock-up for the data to appear on
- Change the graphic in the page (background of the #chart) to your graphic, and edits/tweak the locations of the boxes (now on top of your graphic) in the style.

- Somewhere in the page add a list direct hyperlinks to the five different medications, like I did above for conditions
